C. TOXIC SUBSTANCE REDUCTION PLANNING

Objectives & Targets

Substance	Objectives & Targets	Reduction Option Progress
Copper (and its compounds)	Reduce the use of Copper (and its compounds) by implementing improved operating procedures and training efforts with a goal of improving department specific first time through numbers.	All team leaders and process coaches participated in the Ford Production System (FPS) training which included a review of all FPS elements (safety, quality, delivery, cost, people, maintenance and environment).
Manganese (and its compounds)	Reduce the use of Manganese (and its compounds) by implementing improved operating procedures and training efforts with a goal of improving department specific first time through numbers.	
Oxides of Nitrogen and Carbon Monoxide	Reduce the creation of Oxides of Nitrogen and Carbon Monoxide by investigating reduced temperature set points for natural gas equipment and instituting operating practices to reduce run-time.	Adjustment of run time based on indoor and outdoor temperatures and forecasts is completed continuously. Large boilers are being shut down earlier in the year and re-started later in the year than has typically been done in the past. Small

Substance	Objectives & Targets	Reduction Option Progress
		door heaters are used for supplemental heat if needed. Doors are monitored to ensure they remain closed.
Particulate Matter \leq 10 micron (PM10) and Particulate Matter \leq 2.5 micron (PM2.5)	Reduce the creation of PM10 and PM2.5 by replacing/upgrading a cooling tower (CT-1 or CT-3) at the site and by implementing improved operating procedures and training efforts with a goal of improving department specific first time through numbers.	All team leaders and process coaches participated in the Ford Production System (FPS) training which included a review of all FPS elements (safety, quality, delivery, cost, people, maintenance and environment).
